

# LG ANARION

- + Very high yields from improved genetics and TuYV resistance
- + Stiff canopy, good disease resistance and pod shatter resistance

**Breeder**  
LIMAGRAIN UK

**Type:**  
Clubroot Hybrid

**AHDB region:**  
UK Wide

A non-Recommended List clubroot resistant variety with high yields (97% treated, 93% untreated, 44.3% oil). It is 2% higher yielding nationally than the UK market leader and 10% higher yielding in Scottish trials last year. This is why it has quickly become Agrii's most popular clubroot-resistant variety within two years.

Suitable for all regions of the UK. Excellent autumn (8) and spring vigour (8) in Agrii trials over the past three years and excellent winter hardiness was confirmed in Polish trials. It is quick to grow away in the spring and grows to be relatively tall (159 cm) with excellent standing ability (9) and mid-late maturity (4).

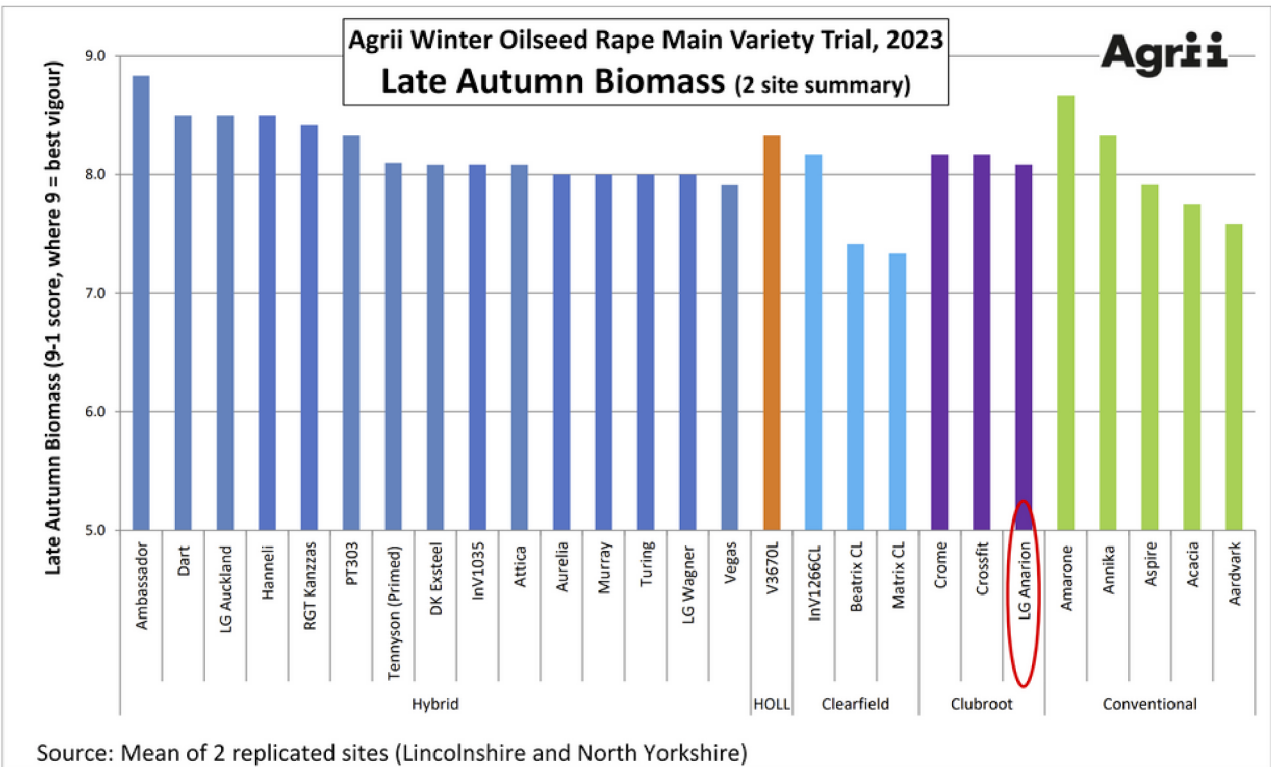

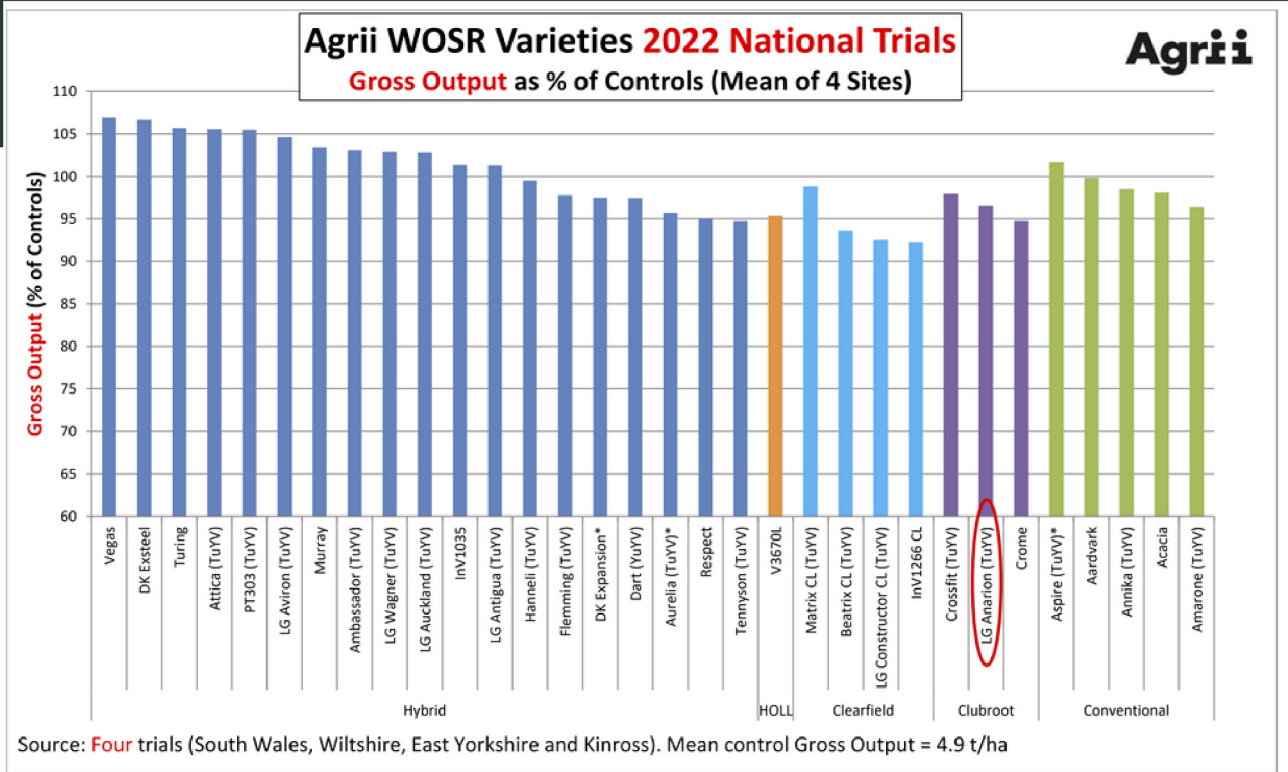

Good light leaf spot (8), RLM7 phoma/stem canker (6) and Verticillium stem stripe (6) resistance. It also incorporates the valuable pod shatter resistance trait which is now standard in all of the hybrids from Limagrain.

Like all the clubroot varieties, LG Anarion should be used as part of an integrated approach using other cultural methods of control. Recommended for use on clubroot infected land only to help protect the longevity of this valuable genetic trait.

	Agrii Trials Results	LG Anarion	
Agrii Data	Yield %	UK Gross Output treated (4.7 t/ha)	97
		UK Gross Ooutput untreated	93
		% Oil	44.3
	Agronomy (1-9, 9=best)	Autumn vigour	7.8
		Spring vigour	7.9
		Height (cm)	159
		Stem Stiffness	9.0
		Flowering	1.7
		Maturity	3.7
	Disease	Light leaf spot	8.0
		Stem canker (AHDB results)	6.0
		Verticillium tolerance	5.5
	Traits	TuYV Tolerance	R
		Pod shatter	R
	Other	Suitable for later drilling (>early Sept)	Y
Soil Type Suitability		C/R soils	
Variety Sustainability Rating (VSR)
