

# KWS DOMINGOS

- + The highest yielding oilseed rape variety in Agrii's trials
- + Resilient to cabbage stem flea beetle larval damage

**Breeder**  
KWS (UK)

**Type:**  
Hybrid

**Agrii region:**  
UK

KWS Domingos was the highest yielding variety in Agrii's trials in 2025 (107% treated, 95% untreated) with similar high yields in official trials (105%) and relatively high oils (46.1%).

Suitable for all soil types and recommended across the UK where it has shown consistent yields. Relatively tall (165 cm), stiff canopy (8), and reasonable lodging resistance (RL 8, Agrii 5) and relatively early maturity (RL 5; Agrii 6). It showed fast development in the autumn (8) and spring (8) which puts it on a par with Agrii's most vigorous types.

It has good all round disease resistance with light leaf spot (RL 7, Agrii 4 England), RLM7 and RLMS phoma/stem canker (8), moderate late season stem health (6) and intermediate Verticillium stem stripe resistance in official trials. It also carries both the pod shatter or TuVY resistance traits.

Agrii data	Yield %	UK Seed Yield treated (4.2t)	107
		UK GO untreated	95
		% Oil	45.8
	Agronomy (1-9)	Autumn vigour	8.0
		Spring vigour	7.6
		Height (cm)	159
		Lodging	5
		Maturity	6
	Disease	Light leaf spot	4
		Phoma (AHDB)	8 RLMS
		Verticillium tolerance	[I]
		TuYV tolerance	Y
	Traits	Pod shatter	Y
	Variety Sustainability Rating (VSR)		High

AHDB data	Yield %	UK GO treated (5.3 t/ha)	105
		E/W GO (5.2 t/ha)	105
		North GO (5.9 t/ha)	[105]
		% Oil	46.1
		Agronomy (1-9)	Lodging
	Stem stiffness		8
	Height (cm)		165
	Flowering		6
	Maturity		5
	Light leaf spot	7	
Stem Canker	8
