BAYER CROP
SCIENCE

Type:
Hybrid

AHDB region:
UK-Wide

One of the highest yielding varieties in Agrii trials every year for the past seven years, which is remarkable given that the variety doesn't have the advantage of the more recent TuYV trait. High gross output hybrid (107%), high untreated yields (94%) and a high oil content (46.4%) in spite of not having the TuYV trait.

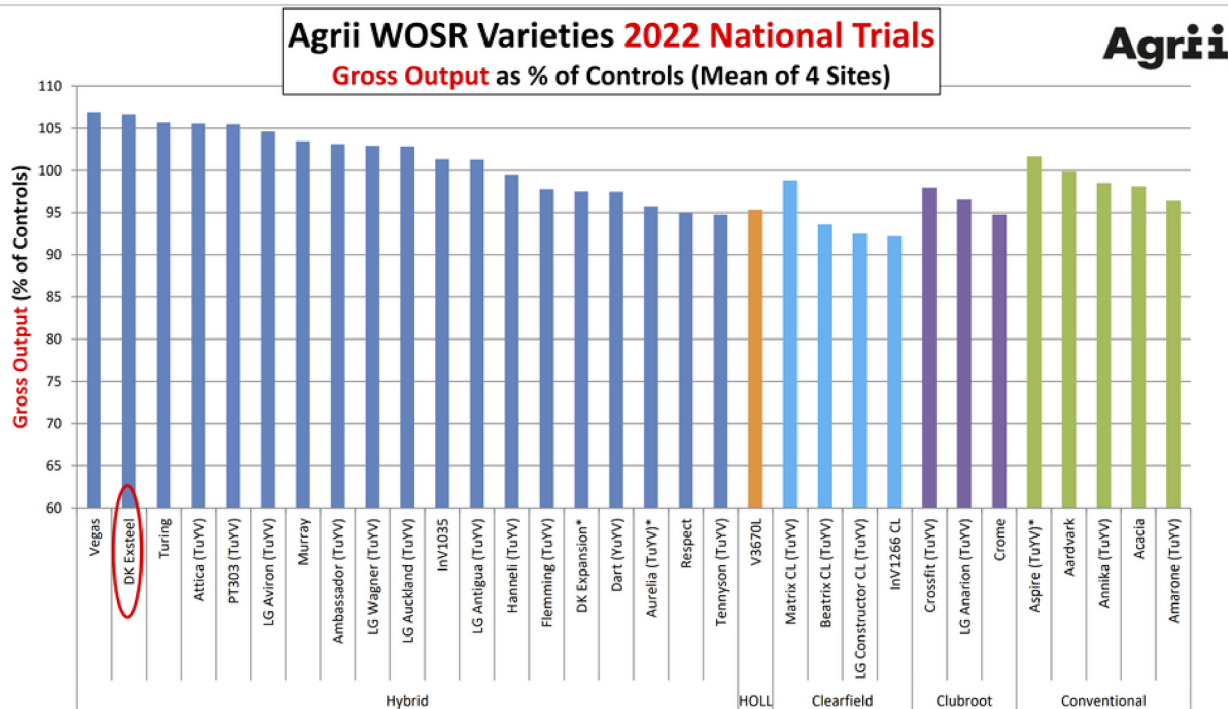

Suitable for all soils and all regions. It has been proven in Agrii trials to perform across the UK especially in cabbage stem flea beetle affected areas because of its vigorous growth habit.

Consistently one of the most vigorous hybrids in the autumn (8) and quick to move away in the spring (8). Trials have shown that it is one of the best varieties to cope with cabbage stem flea beetle larval infestations. This pest has not gone away and the vigorous growth habit of DK Exsteel remains a major advantage.

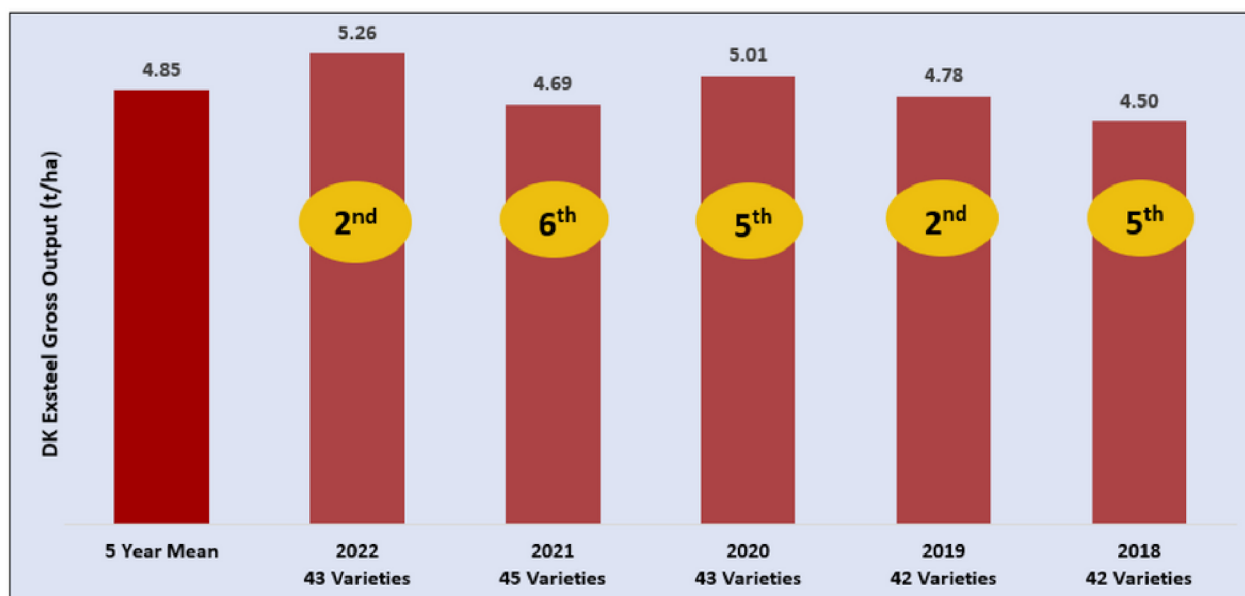

Tall (155 cm), stiff canopy (8) and medium maturity (5). Excellent disease resistance with light leaf spot (8) and RLM7 stem canker resistance (8) and good tolerance to Verticillium wilt (6). It also carries the pod shatter resistance trait. Not resistant to Turnip Yellow Virus.

		Agrii Trials Results	DK ExSteel
Agrii Data	Yield %	UK Gross Output treated (4.7 t/ha)	107
		UK Gross Ooutput untreated	94
		% Oil	46.4
	Agronomy (1-9, 9=best)	Autumn vigour	8.0
		Spring vigour	8.5
		Height (cm)	155
		Stem Stiffness	8.0
		Flowering	3.7
		Maturity	4.7
	Disease	Light leaf spot	8.0
		Stem canker (AHDB results)	8.0
		Verticillium tolerance	6.0
	Traits	TuYV Tolerance	-
		Pod shatter	R
	Other	Suitable for later drilling (>early Sept)	Y
Soil Type Suitability		All*	
Variety Sustainability Rating (VSR)			

NOTE: Numbers in red – Agrii Advisory List data.
Numbers in black – AHDB Recommended List data.

The all-round strength to perform near the top of Agrii national variety trials every year since 2018
