

Master Leys Grass Seed Mixtures

Autumn 2020

SHORT TERM LEYS

Maize Master (Three Way Italian Catch Crop) (Average Heading Date 20th May)

One to two year bulky silage ley

Maize Master is 100 % Italian ryegrass which has rapid establishment and will produce 3-4 bulky cuts of quality silage. Italian Ryegrass grows at lower temperatures making Maize Master ideal for drilling after crops have been harvested in the Autumn. Maize Master is an excellent user of residual N, which has been left by the previous crop and can be used for one big cut in the spring if returning to maize or left down for two full years.

- 30 % Meribel *Diploid IRG*
- 30 % Alamo *Diploid IRG*
- 40 % Gemini *Tetraploid IRG*
- 100 % 25 kg bags sow at 14.00 / acre

Meribel

The highest 1st cut D value > Joint second highest 1st harvest year yields > Joint second highest winter hardiness score

Alamo

Joint highest 1st harvest year yields > Joint second highest 1st and 2nd cut first harvest year ME yield > Joint highest 1st harvest year ground cover score

Gemini

Joint highest 1st harvest year yields > Joint highest total mean yield > The highest 1st cut D value

(Data is taken from the 2020/21 Recommended Grass & Clover List for England and Wales by species and ploidy group)

AgriiTM

Silage Master (Average Heading Date 19th May)

Two year bulky silage ley

Silage Master is a highly productive cutting mixture that produces 3-4 cuts of quality silage for up to 2 years. The high Italian Ryegrass content will also grow at lower temperatures meaning earlier spring and later autumn growth. Trials have shown that the inclusion of an intermediate perennial ryegrass gives increased yields over two years and maintains production for the full duration.

6.00 kg Fox *Diploid IRG*

5.00 kg Hunter / Kigezi *Tetraploid IRG*

3.00 kg Solomon / Boyne *Intermediate Diploid PRG*

14.00 kg per acre

Fox
Joint highest year of sowing yield > Joint third highest 2nd harvest year yield > Good all round variety with a good disease package

Kigezi
Joint third highest total mean yield > Joint second highest first cut yield > Good disease resistance
(Data is taken from the 2020/21 Recommended Grass & Clover List for England and Wales by species and ploidy group)

Two Way Italian Catch Crop Two year silage ley, non-listed varieties

50 % Diploid 50 % Tetraploid *IRG*. 20 kg bags sow at 14 kg / acre

(HSG) = High Sugar Grass (IRG) = Italian Ryegrass (HRG) Hybrid Ryegrass (PRG) = Perennial Ryegrass
