

# InV1035

## Hybrid Oilseed Rape – UK Wide

✦ High treated and untreated gross output

✦ Fast vigorous growth habit in autumn and spring

✦ Agrii's leading hybrid over the past three years. It produces a consistently high treated gross output (101%), high untreated yields (92%) and a high oil content (44.9%) in the Agrii national trials programme.

✦ Marketed under BASF's 'InVigour' brand to emphasise their focus on this important agronomic characteristic. Indeed, InV1035 has shown outstanding autumn vigour over the past five years of testing by Agrii. It has a fast, vigorous autumn growth habit (6) and early spring regrowth (7) which is useful against slugs, pigeons and cabbage stem flea beetle. Suitable for all regions of the UK and it can be grown across all soil types. Relatively short (137 cm), stiff canopy (8) with good lodging resistance (9).

✦ Very early maturity (7) and carries the pod shatter resistance trait. Its high untreated yields can be attributed to its excellent disease resistance profile which is hard to beat. It has one of the best disease resistance packages available with both RLM7 phoma/stem canker genetics (8) and an excellent light leaf spot (6) rating. It also shows good tolerance of Verticillium wilt (7).
