

NORTH

LSPB

HEAR Hybrid

# Rocca

Status	-
AHDB Region	-
Agrii Region	North
<b>Yield &amp; Grain Quality - AHDB 2018-19, (Agrii 2017 Mean)</b>	
UK Treated G.O. (% of Controls) #	
UK Untreated G.O. "	
East/West region	[99]
North region	[99]
Oil Content (%)	[42.9]
<b>Agronomic Characters - AHDB 2018-19, ( ) = Agrii data 2017, [ ] = data supplied by the breeder</b>	
Autumn Vigour (1-9) ex Agrii	-
Spring Vigour (1-9) ex Agrii	-
Height (cm)	[150]
Stem stiffness (1-9)	[5.8]
Resistance to lodging (1-9)	-
Earliness of flowering (1-9)	-
Earliness of maturity (1-9)	[5.0]
Light leaf spot resistance (1-9)	7.0 (6.8)
Canker/Phoma resistance(1-9)	5.0 (6.8)
<i>Verticillium</i> tolerance (1-9)	-
<b>Agrii Intelligence - Complementary Information</b>	
Speed of Development	Fast
Suitable for early drill	No
Late drill > early Sep	No
Pod shatter	No
Specific Genetic Trait	HEAR
Soil type	All
Breeder /Agent	LSPB

## Variety Positioning

- Agrii's number one High Erucic Acid Rape (HEAR) variety that has proven attractive in the North where there is now a significant acreage. Care is needed in the rotation and during storage and transport to minimise the potential to contaminate '00' or HOLL crops.
- Rocca is the preferred variety for the North because of its vigorous growth habit, excellent Light Leaf Spot resistance and early maturity. Suitable for all soil types and best drilled in the main drilling window.
- It produced a medium height canopy but it requires a robust PGR programme as it has only moderate stem stiffness.
- While it has excellent Light leaf Spot resistance it is only average for Phoma/Stem Canker resistance so monitor for this disease and spray as appropriate.
