

Group 2, White wheat
KWS
W175 x Horizon

New
Alabaster

Status	NL Agrii
Treated Yield	99 (95)
Untreated Yield	84 (72)
Hagberg	223
Protein content	12.6%
Specific Weight	79 (76.9)
Lodging (untreated)	1%
Lodging (treated)	1%
Ripening	-1 (Early)
Mildew	7.2
Yellow Rust	7.1 (8)
Brown Rust	6.7 (6)
<i>Septoria tritici</i>	5.8 (4)
Eyespot	5.5
Fusarium	-
OWBM Res.	No

Variety Positioning

- A white wheat that can be grown on contract for a number of end-users in the Eastern counties. Good yields and outstanding physical grain quality. A true winter wheat with early maturity and therefore more likely to be harvested in better conditions than later maturing spring wheat types.
- Suitable only for the Eastern counties but can be grown across all soil types. A fast developing plant-type that is suitable for the main drilling window or later drilling. It is still under test at Stow Longa to evaluate its competitiveness against black-grass. It has stiff straw and is relatively early to mature.
- Good disease ratings for the Mildew and Rusts but Agrii's rating for *Septoria tritici* is lower (4) than its official rating. It has a good Hagberg Falling Number but, as all white wheat varieties are prone to sprouting, it requires priority at harvest.
- It is not resistant to Orange Wheat Blossom Midge.
