

# DK Impressario CL

Hybrid Oilseed Rape (Clearfield) – East. West and Yorkshire

- ✦ Consistently high yielding Clearfield variety
- ✦ Vigorous in the autumn and very quick to re-grow in the spring

- ✦ Agrii's leading Clearfield variety with consistently high yield (96%, treated, 87% untreated) and high oil content (45.1%). Very similar to its predecessor, DK Imperial, but with better disease resistance and a stiffer canopy. Suitable for all soil types and best drilled in the main drilling window through into September provided that growing conditions remain favourable.
- ✦ Moderately vigorous in the autumn (5) but quick to re-grow in the spring (7) to produce a tall canopy (142 cm) that is stiff (9) with good lodging resistance (8) and very early maturity (7).
- ✦ In addition to the herbicide tolerance genetics it also includes the RLM7 phoma/stem canker (8) gene, the pod shatter trait but it comes with relatively weak light leaf spot resistance (4) that needs to be monitored and sprayed for.
- ✦ BREEDER: Bayer Crop Science
