

InV1266 CL

Hybrid Oilseed Rape (Clearfield) – East & West and Yorkshire

- ✦ A non-RL Clearfield variety with exceptional vigour
- ✦ Good light leaf spot, excellent stem canker and pod shatter resistance

- ✦ Identified in Agrii Early-Lines trials last year for its stand-out vigour in the autumn and spring. Gross output in Agrii trials (101% = 4.9t/ha treated) was very similar to its performance in official trials (101%) over two years with very high oils (46.1%). It was also performed well in a Northern NIAB-TAG trial last season (108%) where it outperformed all of the other Clearfield varieties including Matrix CL. This may have been due to its higher oil content and improved disease resistance.
- ✦ Suitable for all soils but probably best grown no further north than Yorkshire. Its excellent crop vigour (6 autumn, 8 spring) complements the Clearfield System by providing early competition for difficult weeds and helps offset the damaging effects of cabbage stem flea beetle larvae. The tallest Clearfield variety tested by Agrii (145 cm) with good stem stiffness (8, Agrii), average lodging resistance (7, BASF) and medium-maturity (5).
- ✦ A significant step up in light leaf spot resistance (5) compared with Matrix CL, Phoenix CL but it still needs to be watched and sprayed for. Light leaf spot generally remains a weakness in Clearfield varieties with the exception of DK Imprint (6) but this is 8 % lower yielding. InV1266 CL has improved genetics include pod shatter resistance and RLM7 phoma/stem canker (7) resistance.
